Why Choose Dalgan Windows

Dalgan Windows is a family run business manufacturing and installing Windows and Doors for both new and existing homes for over 40 years.

We pride ourselves on being replacement specialists

..... Our Product Range

Windows and doors produced in a choice of:

- uPVC
- Timber,
- Aluminum.

Our interior product range includes:

- Skirting
- Architrave
- Stairs
- Internal Doors
- Window Boards

What does replacing windows or doors involve?

The answer is very little if you choose Dalgan as your provider

- Our products are installed by experienced personnel.
- We carry out our work with minimal disturbance to your household.
- We remove all building debris on completion of the job.
- All finishes are completed to an exceptionally high standard.
- Finance can be arranged

..... 'Quality Without Compromise'

In 1994 Dalgan Industries received the ISO 9002 International Quality Standard for the very high standards we bring to the manufacturing and installation of our Windows, Doors, and Stairs and Double Glazed units.

We have achieved Q-Mark certification for our uPVC casement window under the General Performance and Enhanced Security schemes,

In addition, the company has been awarded BFRC A, B & C window energy ratings for the PVCu window and timber windows.

In January 2009, changes in Irish and EU legislation has meant that buildings now require a BER Rating. One of the attributes that affects the BER is the glazing used in your building.

By installing Dalgan's Ultra-Therm High Energy Saving Windows, you can improve this BER rating and

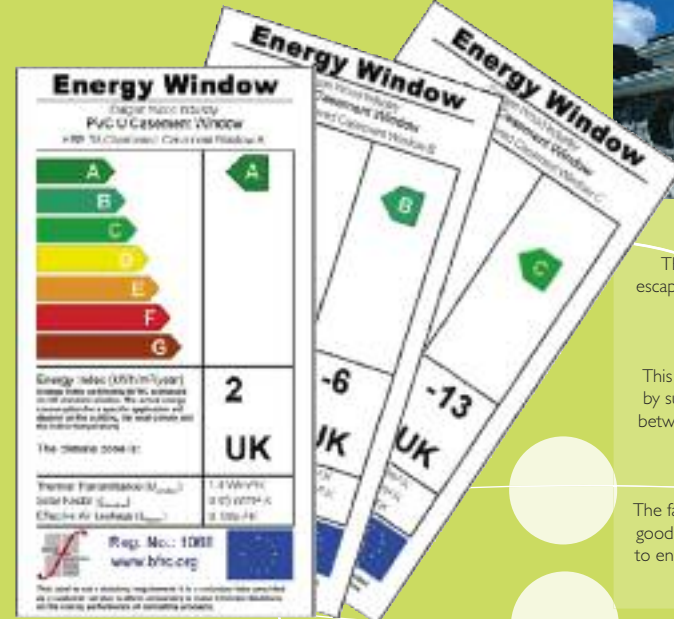

- Save money on heating bills
- Have a warmer home by reducing the energy lost throughout your house.
- Assist in protecting the environment
- Noise Reduction

Our Products stand for quality and are:

- Manufactured with German profile
- Manufactured with dependable hardware
- Lead Free
- Recyclable
- Installed by experienced fitters

For more information on Dalgan's energy efficient windows have a look at our website:

www.dalganwindows.ie

Thermal Transmittance (U-value)

This measures how well a product prevents heat escaping. The energy rating value is based on a standard window to enable comparison of product.

Solar Factor (g-value)

This measures how well a product blocks heat caused by sunlight. The Solar Factor is expressed as a number between 0 and 1. A lower Solar Factor means less heat gain.

Air Leakage (L50 value)

The factor L50 in the formula is an air leakage factor. For good quality windows, air leakage makes little difference to energy performance, for leaky windows, the impact is significant.
